

**DIANA CIOBANU O.D.  
& Associates**

**Digital Fundus Photography**

Digital retinal photography consists of a digital camera system that takes a photograph of your retina, the sensitive tissue in your eye that is responsible for vision. The photo allows for a detailed view of the inner lining of the eye and is quick, easy and comfortable.

Dr. Ciobanu strongly recommends a photo for patients with a personal or family history of high blood pressure, diabetes, macular degeneration, glaucoma, retinal holes, or detachments.

The benefits:

- An enhanced, high resolution digital image of the blood vessels and the inner lining of the eye
- The image becomes part of your permanent medical record allowing us to monitor for further changes
- Facilitates the early diagnosis of many health conditions including high blood pressure, macular degeneration and glaucoma

Generally, insurance does not cover the \$39 fee for retinal photos, as a result you will be responsible for the cost.
