Digital Retinal Photography

Digital retinal photography takes a photo of the layer at the back of your eye containing light sensitive tissue that is critical for vision. The photo allows for a detailed view of the inner lining of the eye which is quick, easy, and comfortable.

Dr. Ciobanu strongly recommends a photo for all patients over the age of 10 years old, especially those with a personal or family history of high blood pressure, diabetes, macular degeneration, glaucoma, retinal holes or detachments.

The benefits:

- An enhanced, high resolution digital image of the blood vessels and the inner lining of the eye.
- The image becomes part of your permanent medical record allowing us to monitor for further changes.
- Facilitates the early diagnosis of many health conditions including high blood pressure, macular degeneration and glaucoma.

Generally insurance does not cover the \$39 fee for retinal photos, as a result you will be responsible for the cost.
